

Welcome to Body Beautiful Laser Medi Spa

Body Beautiful has a mission to deliver safe and trusted treatments, ensuring we are meeting your individual cosmetic needs. It is very important for our patients to understand their conditions, discover what cosmetic procedures and skin-care products to use to treat the root of problems. We will customize treatment packages for both women and men who want to look and feel younger by delivering effective, comfortable and safe state of the art treatment programs. These provide for optimal and visible results with little to no downtime. We incorporate the newest, safest, most effective cosmetic medicine treatments available and are constantly researching and educating our staff on the best practices available.

You've found the ultimate professional skin care center for aesthetic treatments at Body Beautiful Medical Spa. We specialize in cosmetic and anti-aging procedures and strive to bring you the best care through superior technologies and expertise.

- RF, Alma Accent XL
- Lyra, Laser Scope
- Evlt, VNus Closure
- Lumenis LightSheer Diode Lasers
- Formostar - IR Body Wraps

Hand Rejuvenation

Apart from the face and neck, hands are the most visible, unclothed area of the body and are more often left unprotected from harsh environmental elements and over time can develop premature signs of aging.

You don't have to hide your hands anymore!

Let us turn back the hands of time by reducing the appearance of protruding veins, sunken in, crepe like skin. At Body Beautiful Laser Medical Spa we can also lighten sun spots, age spots, freckles, scars and loose saggy skin on the hands. Our technicians use a range of different high end lasers to treat these safely and effectively with little down time.

Aging is a natural process that happens to all of us. Many people develop large bulging veins on the back of their hands as they age. This causes the veins to become more noticeable and appear enlarged. Generally, this is due to their skin relaxing and thinning with age. We now offer an innovative in-office procedure to eliminate unwanted hand veins.

Traditional treatments offered are on an outpatient basis and some may be performed with local anesthesia. With the assistance of lasers we can prolong or reverse that process.

Eyelash hypotrichosis is another name for having inadequate fragile, thin, sparse or not enough eyelashes. LATISSE is a prescription treatment used to grow eyelashes; for those who desire longer, thicker, stronger, darker or add more fullness. After only a few weeks, this remarkable innovation can make them look as if you had spectacular extensions.

Ensure the face is clean, makeup and contact lenses are removed. Once nightly, place one drop of LATISSE® (bimatoprost ophthalmic solution) 0.03% on the disposable sterile applicator supplied with the package and apply evenly along the skin of the upper eyelid margin at the base of the eyelashes.
